

INTRODUCTION

OSI Systems, Inc. specializes in critical applications in homeland security, healthcare, defense and aerospace. OSI contracted Monarch, as a Minority Owned Business Enterprise, to perform Network Assessment and Design services for OSI's Vehicular Security project at the new and iconic World Trade Center in New York City.

Background

The Port Authority of New York and New Jersey awarded OSI Systems the Vehicular Screening program at the One World Trade Center. During the tower's construction, OSI enlisted Monarch to assist in Network Assessment services.

SOLUTION

- Physical Inspection and Technical assessment of the network infrastructure for the new vehicular screening program
- Submitted Network Design Recommendation Report for improved network optimization and certification qualification
- Provided certification services after recommendations were implemented and completed

BENEFITS

- Reduced risk of latency or slow connection
- Improved Operation efficiency
- Certification
