

INTRODUCTION

ThyssenKrupp is a transnational business that is dedicated to the production of steel, elevators, automotive industry and technology tools. Due to their exponential growth into North and Latin America, ThyssenKrupp solicited Monarch to provide network integration and support for their operational move.

Background

With the openings of new divisions in different parts of Mexico, ThyssenKrupp needed to count on better information and communication technologies inside their divisions to increase their production performance.

SOLUTION

- Expansive 200,000 feet of infrastructure installation for two automotive divisions of Camshaft and Bilstein
- Cisco Network solutions configured and implemented: routing switching, unified communication IP telephony, and LAN Controller Wireless Networks

BENEFITS

- Comprehensive communication inside and outside the plant floor with better performance in production to offer high quality services and products for ThyssenKrupp clients
- Streamlined efforts in development, design, and production with the implementation of advance Unified Communication networking and equipment technology.
